

Foreword

I am presenting a monograph concerning advances in dentistry, with a belief that reading the presented articles will show current trends in dental prevention, diagnostics, therapy and rehabilitation, will familiarize with modern methods and technologies, as well as will allow for acquaintance with the latest state of knowledge.

Dentistry, which belongs to the fields of medical and health sciences, despite narrow specialties emerging within its scope, is today undoubtedly of interdisciplinary character, which is strictly related to scientific progress.

The results of dental epidemiological, experimental and clinical studies are the basis for developing and introducing new standards in everyday clinical practice in persons in various age, with varied health problems or expectations concerning aesthetics. Modern dental office equipped with innovative technological solutions, in connection with an experience of specialists, ensure successful therapeutic results.

The presented works prove knowledge of modern methods of dental treatment and articulately indicate directions of the mainstream of Lublin academic dentistry.

Prof. Andrzej Drop, M.D., Ph.D.
Rector of the Medical University of Lublin
